Anchored in New York's East River, he now plans on selling his yacht and buying a car to tour America.

# Churchill Port Is Busy During Short Season

By DENNIS MURPHY

**CHURCHILL, Man.**—Summer rides into this northern seaport going west. From the first arrival in mid-July until the final departure in October, Churchill is a busy place. Churchill has to make the most of the brief respite from the long days of the northern winter.

Churchill is on the west shore of Hudson Bay, more than 900 miles from Winnipeg. The Hudson Bay Route Association, long-time booster for the little port, claims it can become a major world grain-shipping centre.

There is evidence in support of a steadily-circling figure for bushels-per-acre shipped through here. In 1930, the harbor handled just over 6,000,000 bushels. The figure increased by 1,000,000 bushels in 1931, and another 1,000,000 in 1932.

The port was named for the first Duke of Marlborough, one of the greatest Churchill family names.

English gives a fast-lane Indian sign some of the credit for establishing the settlement. An early party of Indian hunters, to make friendly contact with trading Indians, was controlled by a Canadian who translated to and the expedition.

The British found an Indian aviator, a Chipewyan who was captive of the Cree.

According to the legend, the lake interpreted for the whites and talked so fast and with such conviction that the Cree abandoned their scalp-hunting plans.

Churchill is a favorite centre for scientific investigation, and survey parties from both the Canadian and United States governments often come close to establishing the 830 regular residents. Among other projects, coming up studies have been made for the Hudson Bay party from the U.S. wildlife service is busy hunting game, while another group studies the timberline.

Civilization is steadily creeping northward. For the first time in this year the voters list increased from 100 to 200. For the first time, 70 teachers will be required to handle the school re-opening this fall.

Immigrants are entering through the port in larger numbers than ever, and an immigration officer is stationed here to handle the shipping matters. Prospects are active in the area.

The late spring delivery of the netting and halting of birds but game were sent before the snow was on the ground. Swans, which nest farther north, were delayed in their migration by the late season and won't lay a single egg until the snow has melted on the Churchill river.

## Biological Study Of Sask. Lakes

**PRINCE ALBERT.**—Saskatchewan biologists branch is undertaking a detailed biological study of lakes in the Buffalo region of northwestern Saskatchewan which will make possible further utilization of the area's fisheries.

The study is being directed by Dr. B. Rawson, head of the Fisheries Department of the University of Saskatchewan. Lakes under investigation are Peter Pond, Churchill, Prosser, and Lac Seul.

Dr. MacDonald said the study will determine the lake's carrying capacity and how much can be harvested from the lakes, and particularly the amount of fish production for which the lake is suitable for fish raising.

Information gained from the study was needed for implementation of a conservation program "serving the best interests of both the fisherman and the landowner." Because much ranching is being done in the area, it was an essential that production of species be increased, and to make fish food, increased.

## A BAKER'S DOZEN

The "Baker's Dozen" is a new diet originated when King Louis of France warned all bakers who were under sentence that if they did not bake a dozen loaves of bread for the poor, they would be hanged.

Cracking the street is easy enough. If only you know your steps. But how many steps can a night? That's a pretty tough one to help.

# Experts Say Fog Beats Water For Fighting A Fire

ANY ARBOR, Mich.

The fog is created by playing a few drops from an inch-wide-lane nozzle, under 75 pounds pressure, into the air. This creates a mist of 200 cubic feet of steam fog for every cubic foot of water.

The fog expansion forces the heat and gases out and extinguishes the fire.

This method was suggested by the magazine "Scientific American" in 1876. It played for adoption of the system, which is only now catching on.

It took only 60 gallons of water and 67 seconds to extinguish the blazing first floor of an old, eight-room house at 1001 E. 10th St. Temperatures inside the house rose to 1,500 degrees, but quickly cooled in the fog.

The fire was caused by a gas leak and burned before the first floor was set alight.

### Card of Thanks

I wish to express my appreciation to those who supported me and the Liberal Party in the recent election. In the previous Federal election, we had an adverse majority of about 4,000 in the area now included in Acadia Constituency. While we did not win this 1953 election, we did reduce that 4,000 adverse majority to 463, in spite of the fact that there was a third-party candidate in the field. The reason I feel that many voters are coming to realize the folly of "splitter party" representation at Ottawa. In this respect, therefore, I feel that we have accomplished a great deal for the welfare of all the people of Acadia Constituency and, on their behalf, I thank you one and all.

ARTHUR M. DAY, M.D.

peace conference turns out, is to rearm Japan, whose present weakness, like Germany's, creates a dangerous power vacuum between Communist and non-Communist worlds.

U.N. will see plenty of trouble if U.K., India, etc. press for seating of Red China as part of peace settlement. Apart from question whether Red China is a "peace-loving" nation, as specified in U.N. Charter, there is the absurdity of letting her in while keeping such countries as Italy, Spain and Portugal out. Governments of these countries are either as legitimate as the U.N. or have a far clearer foreign and domestic record.

### PEACE AND PROSPERITY

In their attempt to discredit the free private enterprise economy, and to persuade voters to discard it in favor of their own brand of centrally directed, planned economy, the Socialists and Communists make much of the allegation, quite untrue, that Canadian bread, deflation and unemployment, and escape it only during temporary periods of war or threatened war, when the slack in the economy is taken up by the mobilization of large forces of fighting men and women and the activities of defense plants.

The Socialists will get no support from professional students of the Canadian economy in their thesis that we are headed for a depression, because of the glimmers of a more peaceful world that may be genuinely shining ahead. In the first place, the wholesale demoralization which they envisage is not a practicable measure now, and may not be for years. In the second place, any release of men and materials which settlement in Korea and an improvement in Soviet relations may make possible will be welcomed by the industrial world, which is engaged in the most impressive program of Canadian expansion in our history. The mistake made by the C.C.F. in supposing the inflationary effects of Korea were superimposed on a static or declining economy, which cannot thrive without massive government spending of this nature. So rapidly has this country's economy been moving ahead that even a colossal program such as the three-year five billion dollar defense effort has not been beyond our capacity to carry. If any slack does develop because of reduced demands for defense, there are plenty of unexploited resources in the field of peacetime activity in which industry can make profitable use of the released manpower and materials, profitable for all Canada.

## FILMS DISTORT FACTS

HOLLYWOOD FILMS would be more successful and informative if greater care was taken by the producers to give a more accurate and detailed account of the every day life in the United States. Many of the present distortions are confusing to the rest of the world and embarrassing to the rank and file Americans.

Each Canadian making a brief visit across the line finds that in many instances the glamor depicted in the films of Hollywood can only be found in a few places, while the producers pass swiftly over the normal life of the average Americans.

For the film industry in any country one of the widest and greatest avenues of constructive publicity is constantly open for reasonable exploitation. The films, like a newspaper, a magazine, or a book, serve best by sticking to the facts.

## The Alberta Pacific Grain Co. Limited, Crop Report

Rye harvesting completed at east of all wheat south and east of Lethbridge. Harvesting of Winter Wheat and Barley under way at quite a few points, and some early fields of spring wheat being cut. With continued dry weather harvesting will be fairly general next week.

A week of hot, dry weather has brought crops along rapidly. Cutting of Fall Rye well advanced and being combined at many points. Cutting of Winter Wheat started at a number of points in the Manitoba-Garden area and some being combined. While some early spring crops are beginning to ripen, most parts of this area will require another two or three weeks of warm, dry weather before such harvesting can be done.

Crop maturing rapidly are result of hot, dry weather. Cutting of Rye well under way and some early fields of Barley being cut in most sections. Old fields of early wheat being cut, but another week or ten days of good weather required before operations become general.

Hot, dry weather has prevailed during the week and crops have continued to make good progress. Cutting of Barley and Rye under way at nearly all points, and with continued good weather, all grain should be ready for cutting by about August 31st.

Stunters, Red, dry weather has been general over the entire Province and crops are making very good progress. Harvesting of Winter crops in the south is well advanced and a start is being made on spring crops. In central and western areas another two to three weeks of warm weather is needed, while in northern areas a week to ten days should see harvesting operations well started.
